2. Citations and explanations (Rule 70.7)

The inventions set forth in claims 1 to 7 are novel and involve an inventive step in relation to the documents cited in the international search report. The aforementioned documents do not indicate that "an intermetallic compound solidifying at a solidifying temperature range, which is a temperature range temperature exceeding a solidus and between said solidus and a liquidus, is crystallized in interstices in a dendrite in the alloy", and it would not be easy for a person skilled in the art to conceive of said feature.
